

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (currently amended) A method for the detection ~~purification~~ of antigen specific T cells, comprising:
 - a. contacting a MHC class I protein-fluorescent protein fusion molecule or a radiolabeled MHC class I protein, bound to a specific antigen with a population of T cells, wherein a source of the MHC class I protein-fluorescent protein fusion molecule is a recombinant cell expressing MHC class I protein fused with a fluorescent protein;
 - b. incubating the fusion molecule ~~MHC class I protein~~ bound to the specific antigen together with the population of T cells for a period of time sufficient for the T cells to internalize the fusion molecule ~~MHC class I protein~~ from the T cell surface; and
 - c. identifying the T cells that have internalized the fusion molecule or the radiolabeled MHC class I protein.
2. cancelled
3. (previously presented) The method of claim 1, wherein said fluorescent protein is green fluorescent protein.
4. cancelled
5. (previously presented) The method of claim 1, wherein the identifying of the T cells that have acquired the MHC class I protein-fluorescent protein fusion molecule is done by detecting fluorescent emission of the fluorescent protein fusion molecule.
6. (previously presented) The method of claim 1, wherein the identifying of the T cells that have internalized the MHC class I protein-fluorescent protein fusion molecule is done by detecting fluorescent emission of the fluorescent protein fusion molecule in a fluorescence activated cell sorter.

DOCKET NO.: JJPR-0004/ORT-1224
Application No.: 09/548,648
Office Action Dated: July 14, 2003

PATENT

7. (new) The method of claim 1, wherein said recombinant cell is a Drosophila cell.
